

MapReduce-3

Problem statement:

XYZ Company keeps track of transactions of products in multiple stores and locations. You work as a Big Data Analyst at this organization. You have been given the task to analyze the data that has been accumulated.

Dataset Description:

The data format is tab separated values, and the dataset is '**store.txt**'. Following are the attributes in sequential order:

- Date
- Time
- Store Location
- Item Description
- Total Cost
- Method of payment

Tasks to be completed:

Find out the store location with total cost.
